

LABORATORY ALLIANCE of Central New York, LLC

**Celiac Disease Profile Assay Unavailable Due to
National Reagent Backorder**

We were recently notified by our supplier of a supply constraint with the kit used to perform the Celiac Disease Profile (test code CELIAC) including the assay components

- Serum Tissue Transglutaminase Antibody IgA
- Tissue Transglutaminase Antibody, IgG
- Gliadin Peptide Antibody, IgA
- Gliadin Peptide Antibody, IgG

We have been actively working to resolve this; however, we have not been successful in finding alternative sourcing. At this time, we do not know when we will receive any additional kits and expect to be impacted at least four weeks.

Effective **Monday, March 4, 2024**, all requests received for the Celiac Disease Profile Assay (CELIAC) will need to be cancelled. We apologize for any inconveniences this shortage creates and will notify you when the national backorder has been resolved and we are able to revert to our normal testing.

Please direct any questions regarding this matter to Jeff DeGroat, Chemistry Manager at 315-410-7028. Thank you.
